Preliminary Valuation

ACME Corporation

Manufacturing/Industry · Metalworking · Portugal

PREPARED FOR

John Doe · CEO

DATE

10/10/2026

This report constitutes an indicative estimate of the company's valuation, generated on the basis of inf ormation provided by the user. It does not constitute financial advice, a contractual proposal, an inv estment recommendation or a formal valuation for legal, tax or accounting purposes; the values pres ented depend on the quality and accuracy of the data entered and on market conditions prevailing on the date this document was prepared.

Executive summary

Based on the data provided, we estimate an **indicative value for shareholders of between 6 901 000 € and 7 687 000 €**. The range results from an Enterprise Value of between 5 501 000 € and 6 287 000 €, calculated on normalised EBITDA of 1 459 000 € and an implied adjusted EV/EBITDA multiple of 3.77x–4.31x. In 2025 (Exercício encerrado (contas aprovadas)), the company reported revenue of 12 350 000 € and an EBITDA margin of 11.8%.

INDICATIVE ENTERPRISE VALUE	INDICATIVE EQUITY VALUE
5 501 000 € — 6 287 000 €	6 901 000 € — 7 687 000 €

Reference-year revenue	12 350 000 €	Normalised EBITDA	1 459 000 €
Normalised EBITDA margin	11.8%	Implied multiple	3.77x — 4.31x
Net Position *cash / (debt)*	(2 200 000 €)	Information completeness	High

Valuation methodology

1. **Determining normalised EBITDA** — EBITDA reported for the last reference financial year, excluding the impact of non-recurring extraordinary expenses and, where applicable, factoring in a theoretical adjustment of property rent to market levels. Normalised EBITDA is 1 459 000 €.
2. **Base sector multiple** — Set by reference to the multiples applied in recent, comparable transactions in the sector and region.
3. **Profile and risk adjustments** — Scale, maturity, growth, revenue recurrence, client concentration, geography, reliance on the shareholder and investment intensity, subject to an overall cap applied to the combined adjustments.
4. **Equity Bridge** — Cash, deposits and other equivalents are added to Enterprise Value, total debt is deducted, and, where applicable, the property included in the transaction perimeter and the pro-forma cash impact of disposing of non-operating assets are added, arriving at Equity Value before closing adjustments.

Company profile

INDICATOR	VALUE
Core activity	Manufacturing and machining of high-precision technical parts for the industrial and energy sectors
Sector	Manufacturing/Industry · Metalworking
Geography	Portugal
Units / locations	Single location
Years in operation	24 years
Employees	50-99
Reference year	2025
Reference period	Closed financial year (approved accounts)

Financial history

YEAR	REVENUE	EBITDA	EXTRAORDINARY ITEMS	NORMALISATIONS
2025	12 350 000 €	1 540 000 €	117 000 €	−198 000 €
2024	11 220 000 €	1 100 000 €	170 000 €	−198 000 €
2023	9 900 000 €	850 000 €	240 000 €	−198 000 €

Revenue CAGR	11.7%
Normalised EBITDA CAGR	23.3%

EBITDA normalisation

LINE	VALUE
Reported EBITDA 2025	1 540 000 €
Non-recurring extraordinary expenses	+117 000 €
Theoretical market rent (owned property)	-198 000 €
Normalised EBITDA	**1 459 000 €**

The normalisation adjustments approximate recurring operating income under a post-transaction scenario.

Other indicators

INDICATOR	VALUE
Cash, deposits and other equivalents	1 200 000 €
Total debt	3 400 000 €
Recurring annual capex	280 000 €
Units / locations	Single location
% Concentration in largest client	12%
% Concentration in top 5 clients	34%
Active clients	21-50

Scope and limitations of this report

This report constitutes an indicative estimate of the company's valuation, generated on the basis of information provided by the user. It does not constitute financial advice, a contractual proposal, an investment recommendation or a formal valuation for legal, tax or accounting purposes; the values presented depend on the quality and accuracy of the data entered and on market conditions prevailing on the date this document was prepared.

Nature of the document

- This is a preliminary indicative valuation, prepared exclusively from information provided by the user, without independent verification, audit or review of the data.
- It does not constitute financial, tax, accounting or legal advice, nor an investment or divestment recommendation.
- It does not constitute a formal valuation (fairness opinion) for legal, tax, accounting or regulatory purposes, nor a contractual proposal or binding offer.
- This document is intended solely for the use of the recipient identified on the cover page and must not be disclosed to third parties without the written authorisation of Lealia Advisory Partners.

Limitations and factors of variation

- The values presented depend on the quality, accuracy and completeness of the data entered. Incomplete or incorrect data will materially change the result.
- The market references used reflect conditions prevailing on the date of preparation and may change rapidly with the macroeconomic, sector and financing context.
- The actual transaction price depends on the buyer's profile, the deal structure, the guarantees, closing adjustments and the negotiation process.
- A definitive valuation requires financial, tax, legal and operational due diligence, as well as documentary validation of the EBITDA adjustments.

> Lealia Advisory Partners assumes no responsibility for decisions made based solely on this document.

Further reading

- After recurring capex of 280 000 €, the indicative conversion of EBITDA into operating cash is 80.8%, before working capital, interest and taxes. Limitation: without a breakdown between maintenance and growth capex, the free cash flow underlying the valuation remains subject to correction in due diligence.
- Working capital has not been analysed at this stage. Limitation: without normalising working capital it is not possible to precisely set the bridge between Enterprise Value and Equity Value, which may give rise to euro-for-euro closing adjustments to the final price.
- Non-recurring adjustments of 117 000 € were declared. Limitation: until validated with supporting documentation, the adjusted EBITDA — and consequently the valuation range presented — remains subject to revision.
- Commercial concentration: the top five clients account for 34% of revenue and the largest client for 12%. Limitation: reliance on a few clients increases the perceived risk of revenue and directly constrains the multiple applicable in the valuation.
- A contracted backlog of 6 500 000 € was indicated. Limitation: without detail on margins, delivery timelines and cancellation terms, revenue visibility was not incorporated quantitatively into the valuation — it was only considered qualitatively.
- The seasonality profile and the monthly distribution of activity have not been analysed at this stage. Limitation: without this analysis it is not possible to assess the intra-year recurrence of results, so the value calculated does not reflect any peaks in activity or seasonal treasury needs during the year.

Why EBITDA multiples

Multiples-based valuation is a market approach: a company's value is inferred from prices paid by investors in recent transactions for companies with a comparable profile. In SME M&A, EBITDA is commonly used as the reference metric because it reflects the capacity to generate operating results before the impact of financing structure, depreciation policy and the tax regime.

It is also the most appropriate method for a preliminary estimate: it requires few discretionary assumptions, is transparent and directly reflects current market appetite for the sector. Its limitation is dependence on the quality of the comparables and the fact that it captures a snapshot of the current business rather than a future growth plan.

EV/EBITDA tends to be most appropriate for companies with positive EBITDA, relatively stable operations and cost structures comparable to the companies used as reference. It is less informative when the company reports negative or highly volatile operating results, when there are significant differences in growth or margin relative to the comparables, or when the business is undergoing significant transformation.

Multiples-based valuation is thus a simple, transparent and market-aligned reference, particularly useful when solid comparables exist and to support an initial estimate of value. Its main limitation is its dependence on the quality of those comparables and the fact that it does not, on its own, reflect the future potential of the business.

> In an actual transaction, multiples are the starting point of the negotiation and are subsequently tested against a cash flow analysis and due diligence.

Alternative methods

DCF - discounted cash flows *(see slides 10 & 11)*

Projects future cash flows and discounts them at a rate reflecting the cost of capital (WACC). It is the most rigorous method when a credible business plan exists, but it is highly sensitive to the underlying assumptions.

Other transaction multiples

In addition to EV/EBITDA, multiples such as EV/Revenue, EV/EBIT or P/E may be used, depending on the sector, maturity and profitability of the company. Their relevance depends on the comparability of the companies and the quality of the information available.

Sector-specific metrics

Complements financial multiples with operating metrics relevant to each business, such as value per unit, client, bed, subscriber or square metre. Particularly useful in sectors where these indicators more directly explain the company's economic potential.

Asset value / liquidation

Values net assets at their market value. Relevant for asset-intensive businesses, acting as a reference floor value.

Adjustments applied to the sector multiple

FACTOR	ASSESSMENT	EFFECT
Business volume	Revenue between €5M and €20M	Neutral
Scale of earnings	Normalised EBITDA below €2M	Negative
Company age	More than 10 years	Positive
Growth	Cumulative growth of 25%	Positive
Units / locations	Operation concentrated in a single location	Negative
Client concentration	Moderate concentration in the top 5 clients	Positive
Client geography	Maioritariamente internacional (65%-90% exportação)	Negative
Reliance on the shareholder (revenue)	Portfolio not heavily reliant on the shareholder	Positive
Reliance on the shareholder (management)	Moderate reliance on the shareholder	Positive
Investment intensity (capex)	Low recurring capex relative to revenue	Positive

The combined adjustments are capped within an overall range of −40% to +35% of the base sector multiple, preventing the combination of factors from producing extreme results. All factors are based on declared information and require documentary validation.

Valuation scenarios

SCENARIO	ASSUMPTIONS	MULTIPLE	ENTERPRISE VALUE	EQUITY VALUE
Conservative	Financial buyer, no strategic premium; multiple at the lower end of the adjusted range.	3.77x	5 501 000 €	6 901 000 €
Base	**Normal process, prepared financial information and assured operational continuity.**	**4.04x**	**5 894 000 €**	**7 294 000 €**
Optimistic	Strategic buyer with identified synergies, multiple interested parties and prior deal preparation.	4.31x	6 287 000 €	7 687 000 €

Enterprise Value sensitivity

EBITDA VARIATION	EBITDA	3.77X	3.91X	4.04X	4.17X	4.31X
+10%	1 604 900 €	6 051 000 €	6 267 000 €	6 484 000 €	6 700 000 €	6 916 000 €
+5%	1 531 950 €	5 776 000 €	5 983 000 €	6 189 000 €	6 395 000 €	6 601 000 €
Base	**1 459 000 €**	**5 501 000 €**	**5 698 000 €**	**5 894 000 €**	**6 091 000 €**	**6 287 000 €**
−5%	1 386 050 €	5 226 000 €	5 413 000 €	5 599 000 €	5 786 000 €	5 973 000 €
−10%	1 313 100 €	4 951 000 €	5 128 000 €	5 305 000 €	5 482 000 €	5 658 000 €

The table shows how Enterprise Value responds to variations in normalised EBITDA and the multiple applied. Equity Value moves accordingly, adjusted for total debt, cash, deposits and other equivalents, and the property indicated in the equity bridge.

Equity Bridge

COMPONENT	VALUE
Base Enterprise Value	5 894 000 €
Plus: cash, deposits and other equivalents	+1 200 000 €
Less: total debt	-3 400 000 €
Plus: real estate within perimeter	+3 600 000 €
Base Equity Value	**7 294 000 €**

Equity Bridge · € thousands

Transaction context and structure

PARAMETER	DETAIL
Reason for the transaction	Succession
Percentage of capital to be sold	Full (90-100%)
Intended structure	Equity sale
Time horizon	1-2 years
Shareholder retention	Remain for 1-3 years
Property	Included in perimeter
Preferred investor type	Strategic (sector) investor

STRUCTURE	IMPLICATION
Sale of 50%–51%	Requires clear governance rules and a shareholders' agreement
Sale of 60%–80%	Buyer obtains control; a significant rollover may apply
Sale of 90%	Residual stake requires protection and exit rules
Sale of 100%	Simpler structure; management continuity becomes critical

> The value of a minority stake should not be assumed to be a simple proportion of the 100% Equity Value. The value may vary depending on control, governance rights, liquidity and the transaction structure.

Value Drivers

DRIVER	DESCRIPTION
Sustained growth	Revenue evolved positively over the period analysed. A demonstrated growth trajectory supports the upper end of the multiple range and reduces the relative weight of execution risk in the negotiation.
Transferable commercial relationships	Revenue does not materially depend on the shareholder's personal relationships with clients, which reduces the likelihood of revenue erosion after closing and limits the need for earn-outs or additional guarantees.
Diversified client portfolio	The top five clients account for 34% of revenue, a comfortable concentration level that reduces perceived commercial risk and eases pressure on the indemnity package.
Contracted revenue visibility	The contracted backlog of 6 500 000 € equates to 52.6% of annual revenue, lending predictability to the business plan presented to the buyer.
International exposure	The client distribution (Maioritariamente internacional (65%-90% exportação)) reduces reliance on a single market and makes the company relevant to foreign buyers seeking a presence in the region.
Established track record	24 years of operation support the reading of business model resilience across different cycles and reduce the operational risk perceived by the buyer.

Risks and mitigants

RISK	AVAILABLE EVIDENCE	IMPACT	MITIGANT
Single-site operation Medium	Activity concentrated in a single site	Limits scalability and concentrates operational and geographic risk	Assess model replicability and expansion plans for new locations
Owned property without an independent valuation Medium	Valuation method indicated: Recent independent valuation	Introduces uncertainty into Equity Value when the property is included in the perimeter	Obtain an independent valuation and define the transaction perimeter
EBITDA adjustments pending validation Medium	Adjustments of 117 000 € declared without supporting documentation	May result in discounts or adjustments during due diligence	Prepare an accounting reconciliation and supporting documentation

Results

PV of explicit forecast (8 years)	5 492 282 €
PV of terminal value	3 742 455 €
Weight of terminal value in EV	41%
Enterprise Value	**9 234 738 €**
Net debt adjustment	-2 200 000 €
Property	3 600 000 €
Equity Value	**10 634 738 €**

Cost of capital estimated on a prudent basis: size and illiquidity premiums are added to sector references, since an unlisted SME carries higher risk than listed sector peers. Beta, ERP, CRP, capital structure and spread are sector proxies; Portugal CIT (Taxa geral de IRC em Portugal para 2025 (redução programada até 17% em 2028).) O Enterprise Value por DCF situa-se 56,7% acima do valor central obtido por múltiplos de mercado. A divergência decorre sobretudo dos pressupostos de crescimento e de margem projetados; num contexto transacional, o intervalo relevante é a interseção dos dois métodos.

The highlighted cell corresponds to the base scenario presented on the previous slide. The matrices isolate the effect of each variable, holding the remaining assumptions constant.

Assumption transparency

The model's assumptions combine the information entered in the form with sector market references, following a conservative criterion — when in doubt, the value that results in a more prudent valuation is adopted. The table below sets out the valuation's structuring assumptions and their source or derivation method.

PARAMETER	VALUE	METHOD / SOURCE
Initial revenue growth	10,0%	Historical revenue CAGR, used as the starting point and converged linearly towards stabilised growth over the forecast horizon.
Projected EBITDA margin	11,8%	Normalised EBITDA margin for the latest financial year, held constant throughout the forecast horizon with no assumed efficiency gains.
Risk-free rate	3,2%	Average yield on the selected country's 10-year government bonds (European Central Bank / IGCP and Tesoro Público).
Beta unlevered / levered	0,90 / 1,21	Sector unlevered beta (Damodaran, Betas by Sector — Western Europe), relevered to the sector target capital structure using the Hamada formula.
Equity Risk Premium	4,6%	Mature-market risk premium (Damodaran, Implied ERP, using the US market as the reference market).
Country Risk Premium	1,5%	Damodaran Country Risk Premiums, derived from the sovereign-rating default spread and adjusted for relative equity-market volatility.
Size premium (SME)	3,5%	Small/micro-cap premium over listed reference companies (Damodaran / Kroll Size Premia). Applied prudently because an SME has a higher cost of capital than listed sector peers.
Specific premium (illiquidity)	1,5%	Premium for equity illiquidity and key-person dependence, commonly applied when valuing unlisted SMEs.
Asset-specific premium	3,5%	Asset-specific risk premium calibrated to the company's risk profile and the consistency of long-term assumptions against market references.
Cost of debt (pre / post tax)	7,2% / 5,8%	Risk-free rate plus the sector's average credit spread and an SME add-on; the form does not collect the company's effective cost of debt.
Capital structure (D / E)	30,0% / 70,0%	Reference sector target capital structure (Damodaran, Debt Ratios by Sector), rather than the company's current structure.
Stabilised growth (years 4-8)	3,5%	Convergence by year 4 to stabilised growth: the historical CAGR is retained between 2% and 3,5%; below 2% it converges to 2%; above 3,5% it is capped at 3,5%, in line with long-term nominal economic growth.
Perpetuity growth	2,0%	Aligned with the ECB's medium-term inflation target; no perpetual real growth is assumed.
Discount convention	End-of-period convention	Assumes cash flows are generated at the end of each annual period and discounted by the corresponding whole number of years.

Prioritised preparation plan

> This section is intended for those considering moving forward with an M&A process. Our team can help you prepare the business to maximise value at sale. Contact us for an initial no-obligation conversation.

PRIORITY	ACTION	EXPECTED IMPACT	EFFORT
High	Reconcile reported and normalised EBITDA and document the adjustments	High	Medium
High	Confirm total debt and cash, deposits and other equivalents available at the reference date	High	Low
High	Analyse normative working capital and the seasonality of the business	High	Medium
Medium	Define the treatment of the property and obtain an independent valuation	Medium/high	Low
Medium	Demonstrate the replicability of the model in other locations	Medium	High
Medium	Define the transaction structure and the intended perimeter	High	Medium

Immediate recommendations

1. Assess the replicability of the model in other locations, demonstrating scale potential to the investor.
2. Decide in advance whether the property should be included in the transaction perimeter and obtain an independent valuation.
3. Validate this indicative valuation with the Lealia Advisory Partners team before any market decision.

How an M&A process unfolds

This section is intended for those considering moving forward with an M&A process. Our team can help you prepare the business to maximise value at sale. Contact us for an initial no-obligation conversation.

01 Kick-Off ~2-3 weeks

- Signing the engagement letter & NDA
- Initial information request
- Information delivery & clarification meeting
- Information analysis and preparation of marketing materials

02 Initial Outreach and First Offer ~8-10 weeks

- Initial outreach to selected financial and strategic investors
- Introductory meetings with interested investors
- Responses to investors' additional information requests.
- Receipt and analysis of indicative offers

03 Due Diligence ~6-8 weeks

- Financial, tax and commercial due diligence
- Legal and documentary due diligence
- Management of Q&A and due-diligence follow-up meetings.
- Consolidation of due-diligence findings & alignment on adjustments.

04 Transaction Documents ~5-6 weeks

- Confirmation and renegotiation of price mechanisms and adjustments (net debt, working capital, earn-out).
- Drafting and negotiation of the SPA and ancillary documents.
- Signing of the definitive documentation.

05 Closing ~4-5 weeks

- Satisfaction of conditions precedent and closing preparation (regulatory approvals and third-party consents).
- Closing & transaction announcement

Thank you.

Thank you for your time. This report is a starting point: turning an indicative estimate into a substantiated valuation requires validating the figures, analysing recent comparable transactions and reading current appetite among financial and strategic investors for your sector.

Next step · 20-minute meeting

A joint review of this report's assumptions, strategic options and market context with the Lealia team.
